

Step 1: Determine your financial obligations

Obligation	Amount	Example
Total income your family would need if you died today (annual salary multiplied by the number of years you want to replace your income)		\$50,000
This is the amount your family needs, before taxes, to maintain their current standard of living; for example, 75% of your current income.		
Outstanding mortgage and other debt		\$200,000
Include any credit card debt you currently have.		
Funeral and other final expenses		\$15,000
Other final expenses can include medical bills, attorney fees, probate costs, etc.		
College costs for children, if applicable		\$80,000
Consider the cost of a four-year institution, public or private, for all children.		
Total amount needed to cover your obligations		\$345,000
Add lines 1, 2, 3, and 4.		
	Total income your family would need if you died today (annual salary multiplied by the number of years you want to replace your income) This is the amount your family needs, before taxes, to maintain their current standard of living; for example, 75% of your current income. Total amount needed to cover your obligations

(>) Step 2: Estimate the money your family will receive from other sources

	Sources of money	Amount	Example
6	Total savings and investments		\$50,000
	Estimate the total funds you have in your bank accounts, retirement accounts, and investments.		
7	Current amount of life insurance, if applicable		\$150,000
	You may already have life insurance through your employer. If so, include the death benefit here.		
8	Existing college funds		\$10,000
	Enter the amount you've already saved for your children's educations.		
9	Total annual income from other sources (multiplied by the same number of years you used to calculate your income in line 1)		\$25,000
	Consider dividends, your spouse's earnings, Social Security, etc.		
10	Total amount of other income and earnings		\$235,000
	Add lines 6, 7, 8, and 9.		

> Step 3: Calculate the additional life insurance needed

	Sources of money	Amount	Example
11	Enter the total financial obligations from line 5		\$345,000
12	Enter the total amount of other income and earnings from line 10		\$235,000
13	Subtract line 12 from line 11		\$110,000
	This is the additional amount of life insurance needed to cover your obligations.
